Press Scheduler

Fully Automated Scheduling of Critical Presses and Employee Resources. Eliminates Hours of Costly, Manual Scheduling Every Day!

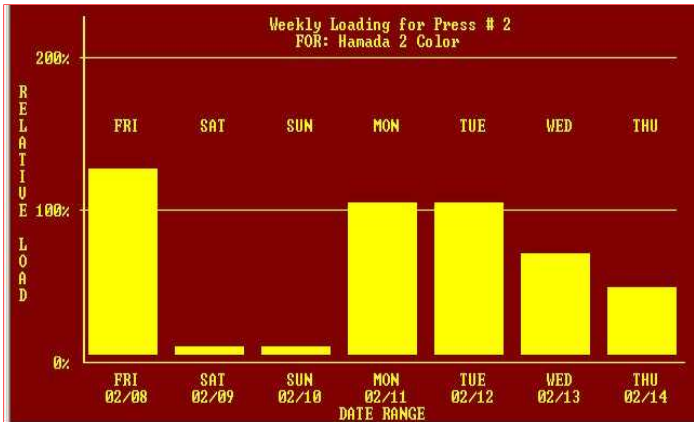

Press Scheduler

GraphiTech's Legacy Press Scheduler is an extremely user friendly, highly sophisticated Critical Path and Resource Limiting Scheduling System.

Every morning, simply print out the daily schedule by hitting a single key. Each Press Resource Schedule identifies the Job to be worked on, the estimated

Designed for use where press work is the primary constraint on schedules, this unique program allows each estimator to have the job automatically loaded to the schedule when the work order is printed!

When management then reviews the schedule for each employee, they may alter, remove or add

start and stop times, plus remaining time, including lunch breaks.

The on-screen and printed Gantt Display permits a rapid review of each employees' schedule as well as providing daily scrolling capability from day to day and hour to hour on a real-time basis.

The Work-in-Process listing permits

management to rapidly identify and jobs which have exceeded their due dates. This particular screen also doubles as a safety net by identifying any job which is past due and has not been invoiced, thus eliminating the possibility of a job being removed from the plant without proper documentation and/or invoicing!

Estimated Work-in-Process Jobs

additional time to the schedule, on demand.

A typical Bar Chart identifying the work load of an employee provides immediate insight into the over time of the employee and the level of loading on each press for the week. And a Bar Chart is available for each employee resource.

The GraphiTech Press Scheduler is a unique and systematic approach to the problems of scheduling. And best of all, it is fully automated!
